

Maintenance Program Outline

Summary

The Industrial Gas Technology, Inc. maintenance program is a multifaceted program geared toward keeping our customers' compressors operating at an optimal level, focusing on operational efficiency, gas leakage control, and lowering power consumption, while limiting operating costs, and extending warranty terms for operational peace of mind. The maintenance program is based on a (24) month schedule. After purchase of a new compressor, or rebuild/recertification of the customers' existing compressor the customer will receive a (1) year warranty on the equipment. After completing the PM service for (18) months, the customer will return the compressor to Industrial Gas Technology, Inc. for rebuild/recertification at (24) months, which will start the process again re-applying a (1) year warranty to the compressor. To take full advantage of the program there are (5) steps to complete:

1. Purchase a **new compressor** from Industrial Gas Technology, or have Industrial Gas Technology, Inc. **Rebuild/Recertify** your existing compressor. Both of these options will give you a one year warranty on the compressor.
2. **Receive Preventative Maintenance Tag** with New/Rebuilt Compressor, and **purchase Spare Parts Kit**, which includes (1) year recommend spare parts. ****Spare parts kits from Industrial Gas Technology purchased through the maintenance program are offered at a 10% price reduction to customer (that's 10% on top of customers' current discount).**
3. **Training** - Compressor Maintenance Training from Industrial Gas Technology is an optional service. We do not require training for our maintenance program, but highly recommend it for the safety of the technicians, and equipment health.
4. **Preventative Maintenance Execution** - The preventative maintenance completed by customer, as outlined on the Maintenance Tag, using parts from Spare Parts Kit.
5. **Recertification** by Industrial Gas Technology, Inc.
